

MODULE 1: INTRODUCTION TO PROGRAMMING

Introduction to Tools

Welcome to Tech Elevator!!

Tom Anderson

- Seattle-ite
- U of W BS
- Capella MS
- Been there, done that
 - ✓ Microsoft
 - ✓ Blackberry
 - ✓ PA Cyber
 - ✓ Various Startups
- **Passionate Golfer**
(although not very good)

How's it going to feel?

Who is this?

Net Worth (2024) \$1.3 Billion

Net Worth (2024) \$15 Million

Public Service Announcement

Start with the Basics

Slack: Chat communication

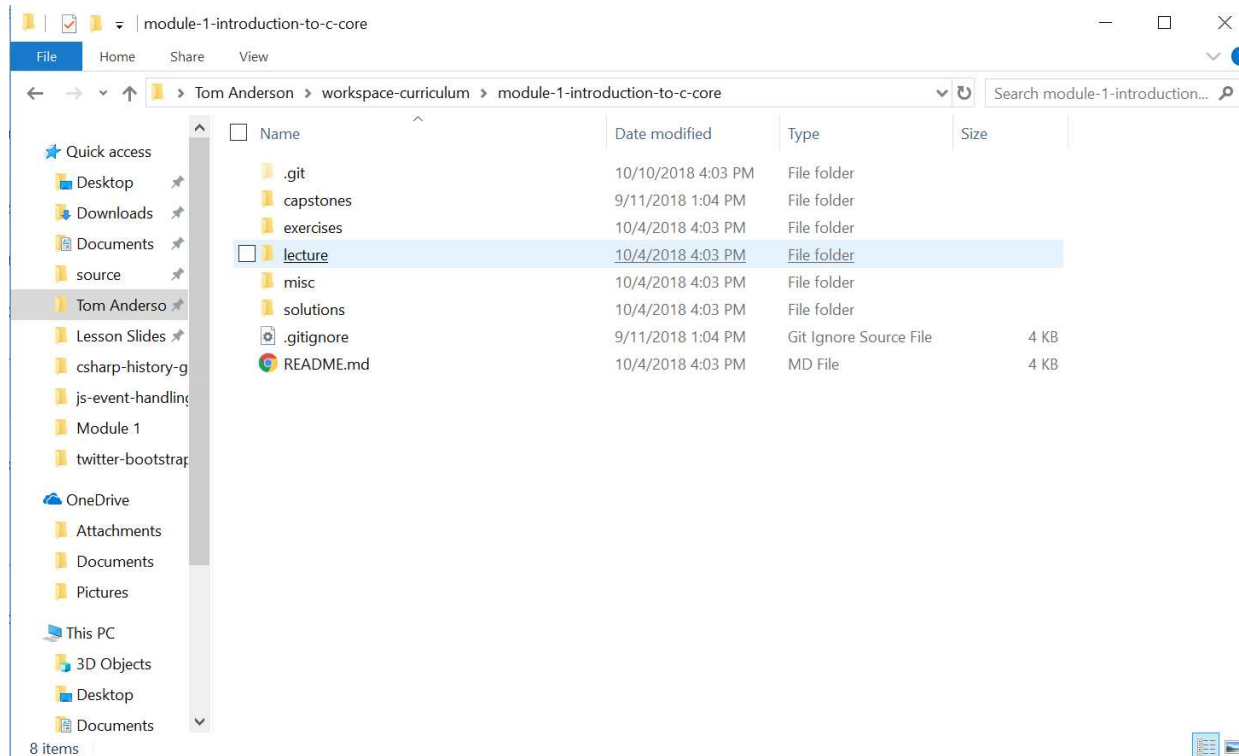

GitLab: Code Repository

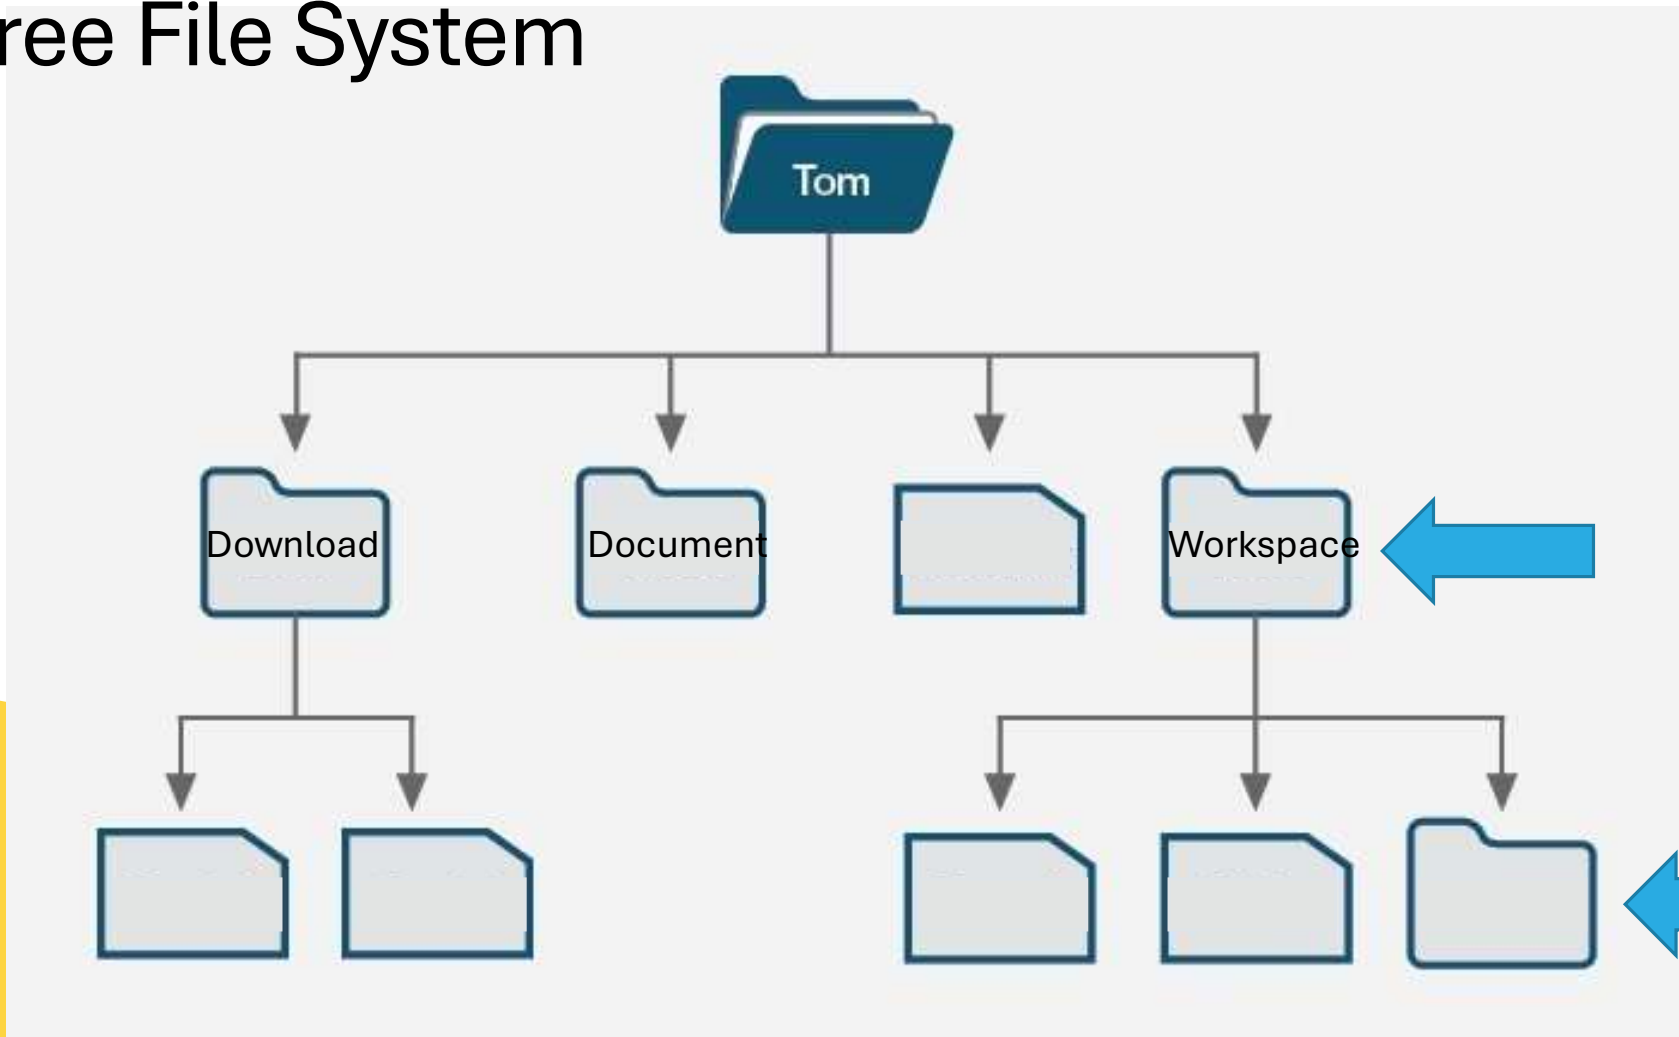

Mouse has an off switch

Navigating your computer

Tree File System

File System

- Files are the parts of the file system that contain the stuff we want. Documents, songs, spreadsheets, etc.
- Folders hold other folders and files. All files exist in some folder in the file system.
- All of these objects have metadata that describe them. Things like modified dates, names, and permissions are pieces of data that are attached to files and folders as part of the file system.

Navigating your computer like a developer

```
Tom Anderson@Dell-V-2-Multi MINGW64 /c/WINDOWS/system32
$ cd ~

Tom Anderson@Dell-V-2-Multi MINGW64 ~
$ cd workspace/

Tom Anderson@Dell-V-2-Multi MINGW64 ~/workspace
$ cd te-curriculum-may-2022/
✓ ~/workspace/te-curriculum-may-2022 [main|✓]
09:24 $ cd java
✓ ~/workspace/te-curriculum-may-2022/java [main|✓]
09:24 $ ls
final_capstone/  module-1/  module-2/  module-3/  resources/
✓ ~/workspace/te-curriculum-may-2022/java [main|✓]
09:24 $ ls -al
total 28
drwxr-xr-x 1 Tom Anderson 197121 0 May  9 08:20 ./
drwxr-xr-x 1 Tom Anderson 197121 0 May  9 08:20 ../
drwxr-xr-x 1 Tom Anderson 197121 0 May  9 08:20 final_capstone/
drwxr-xr-x 1 Tom Anderson 197121 0 May  9 08:20 module-1/
drwxr-xr-x 1 Tom Anderson 197121 0 May  9 08:20 module-2/
drwxr-xr-x 1 Tom Anderson 197121 0 May  9 08:20 module-3/
drwxr-xr-x 1 Tom Anderson 197121 0 May  9 08:20 resources/
✓ ~/workspace/te-curriculum-may-2022/java [main|✓]
09:24 $
```

What is a Shell

In a shell, you write lines of code that the computer understands to get the computer to do what you want.

Many tasks in programming are done on the command line because it is more flexible than most GUI interfaces and can be scripted.

We will be using a very popular shell called Git Bash.

LET'S CODE!

Where's my document?

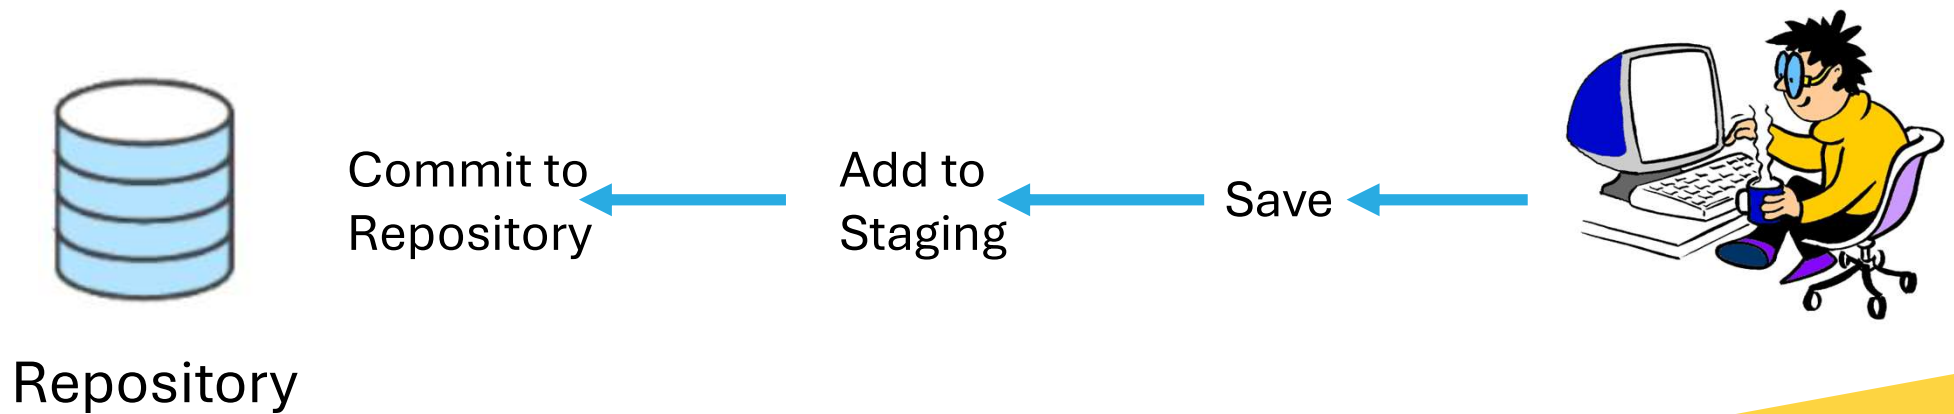

Version Control

- **Version Control** record changes to a file or sets of files so that previous versions can be recalled at a later point in time.
- **Git** is a distributed version control system that keeps a copy of its changes and file sets in a repository.

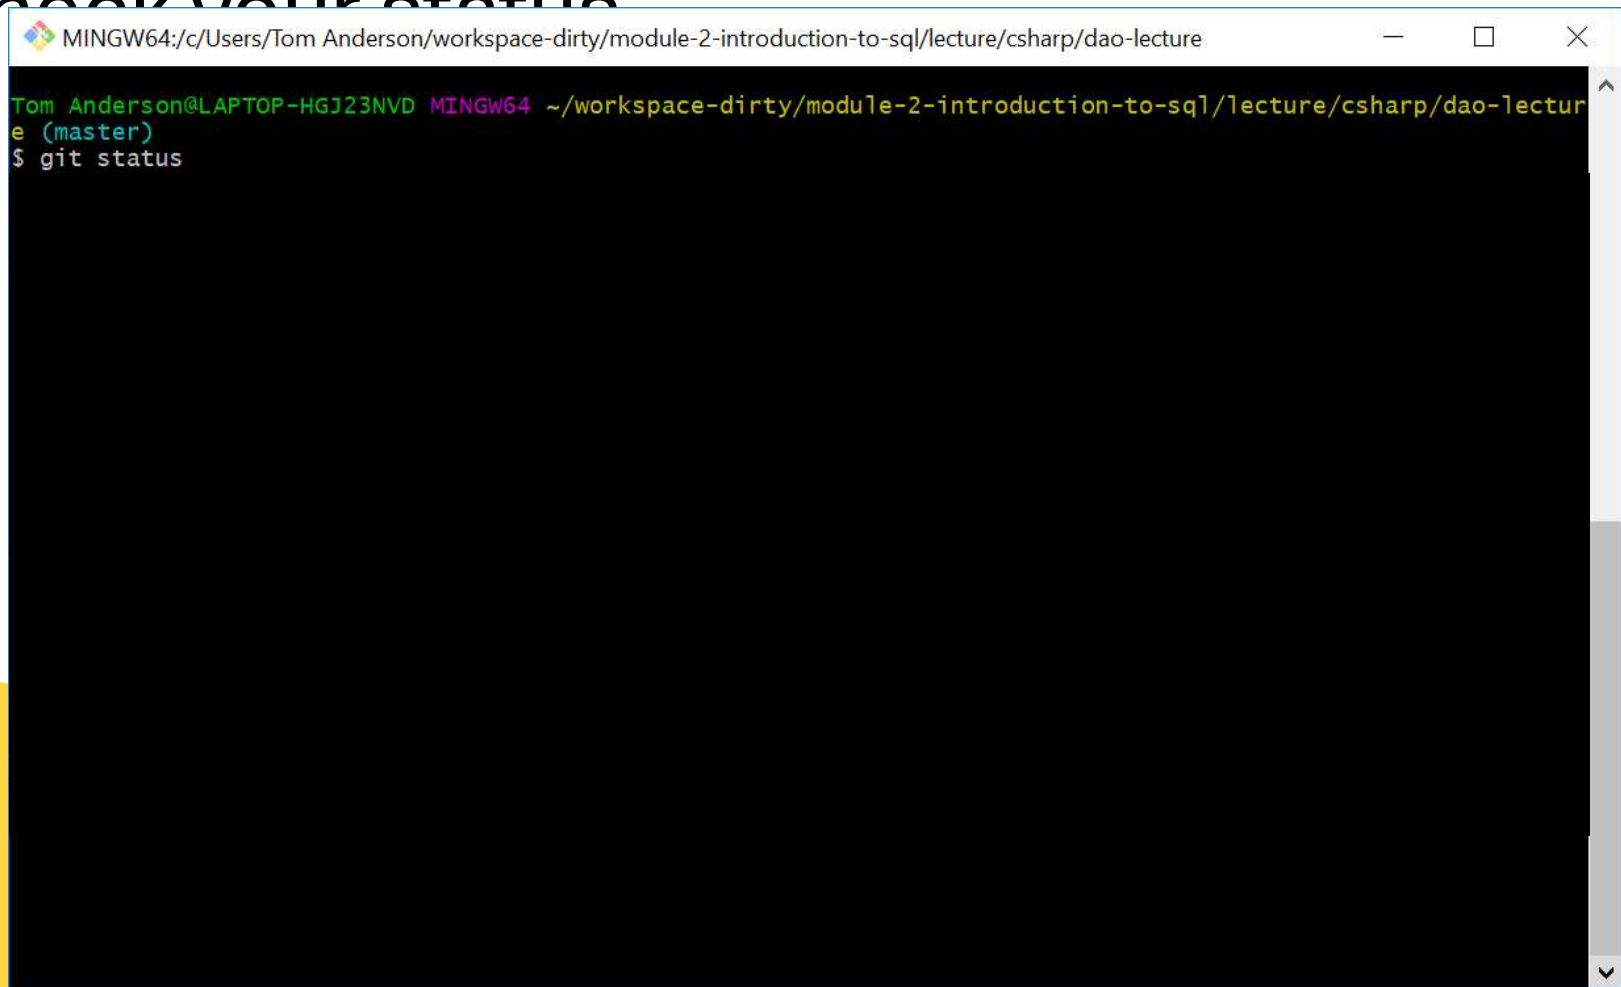

Version Control Process

Version Control Process

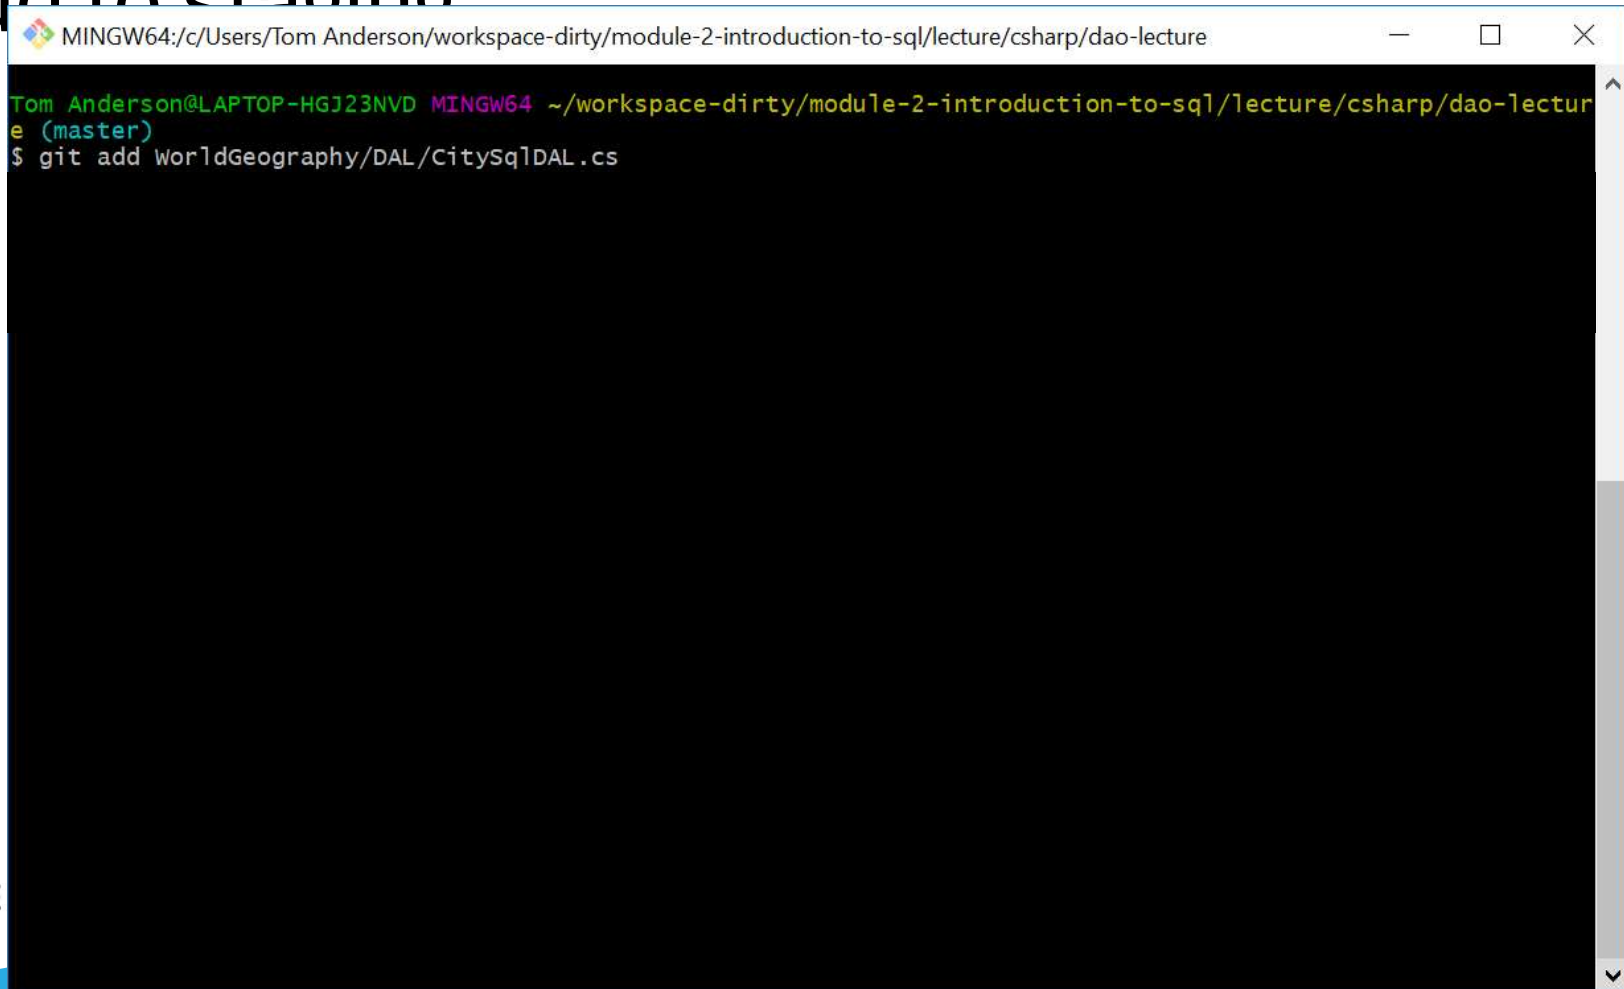

Check your status

A screenshot of a Windows command prompt window titled "MINGW64: c:/Users/Tom Anderson/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture". The prompt shows the user "Tom Anderson@LAPTOP-HGJ23NVD" in a "MINGW64" environment at the directory "~/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture". The user is on the "master" branch and has entered the command "git status". The output of the command is not visible, suggesting it might be scrolled out of the frame. The terminal window has a standard Windows title bar with minimize, maximize, and close buttons. A blue circular icon with a white arrow pointing up is located in the bottom right corner of the image.

```
MINGW64: c:/Users/Tom Anderson/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture

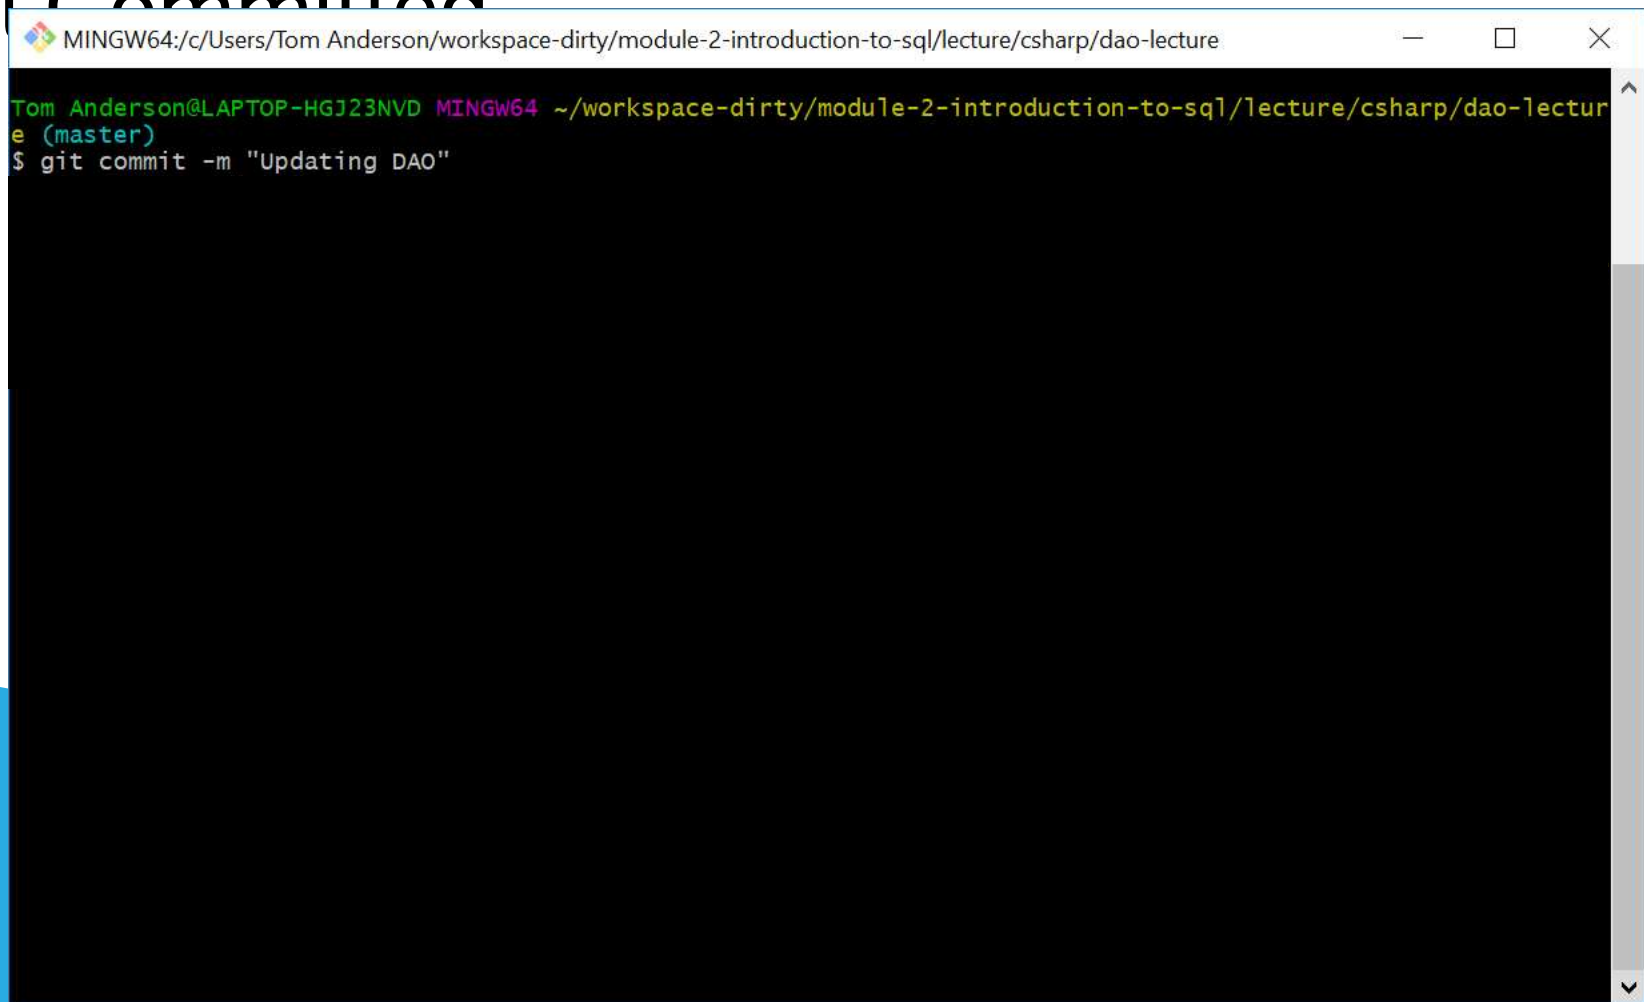

Tom Anderson@LAPTOP-HGJ23NVD MINGW64 ~/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture
e (master)
$ git status
```

Add to staging

A screenshot of a Windows terminal window. The title bar shows the path: MINGW64:/c/Users/Tom Anderson/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture. The terminal content shows the user 'Tom Anderson@LAPTOP-HGJ23NVD' in a 'MINGW64' environment at the directory '~/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture'. The prompt is 'e (master)' and the command entered is '\$ git add WorldGeography/DAL/CitySqlDAL.cs'.

```
MINGW64:/c/Users/Tom Anderson/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture
Tom Anderson@LAPTOP-HGJ23NVD MINGW64 ~/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture
e (master)
$ git add WorldGeography/DAL/CitySqlDAL.cs
```

Get Committed

A terminal window titled "MINGW64:/c/Users/Tom Anderson/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture" is shown. The prompt is "Tom Anderson@LAPTOP-HGJ23NVD MINGW64 ~/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture". The user has entered the command "git commit -m 'Updating DAO'". The terminal output is mostly black, indicating a successful commit. A blue circular icon with a white arrow is visible in the bottom right corner of the terminal window.

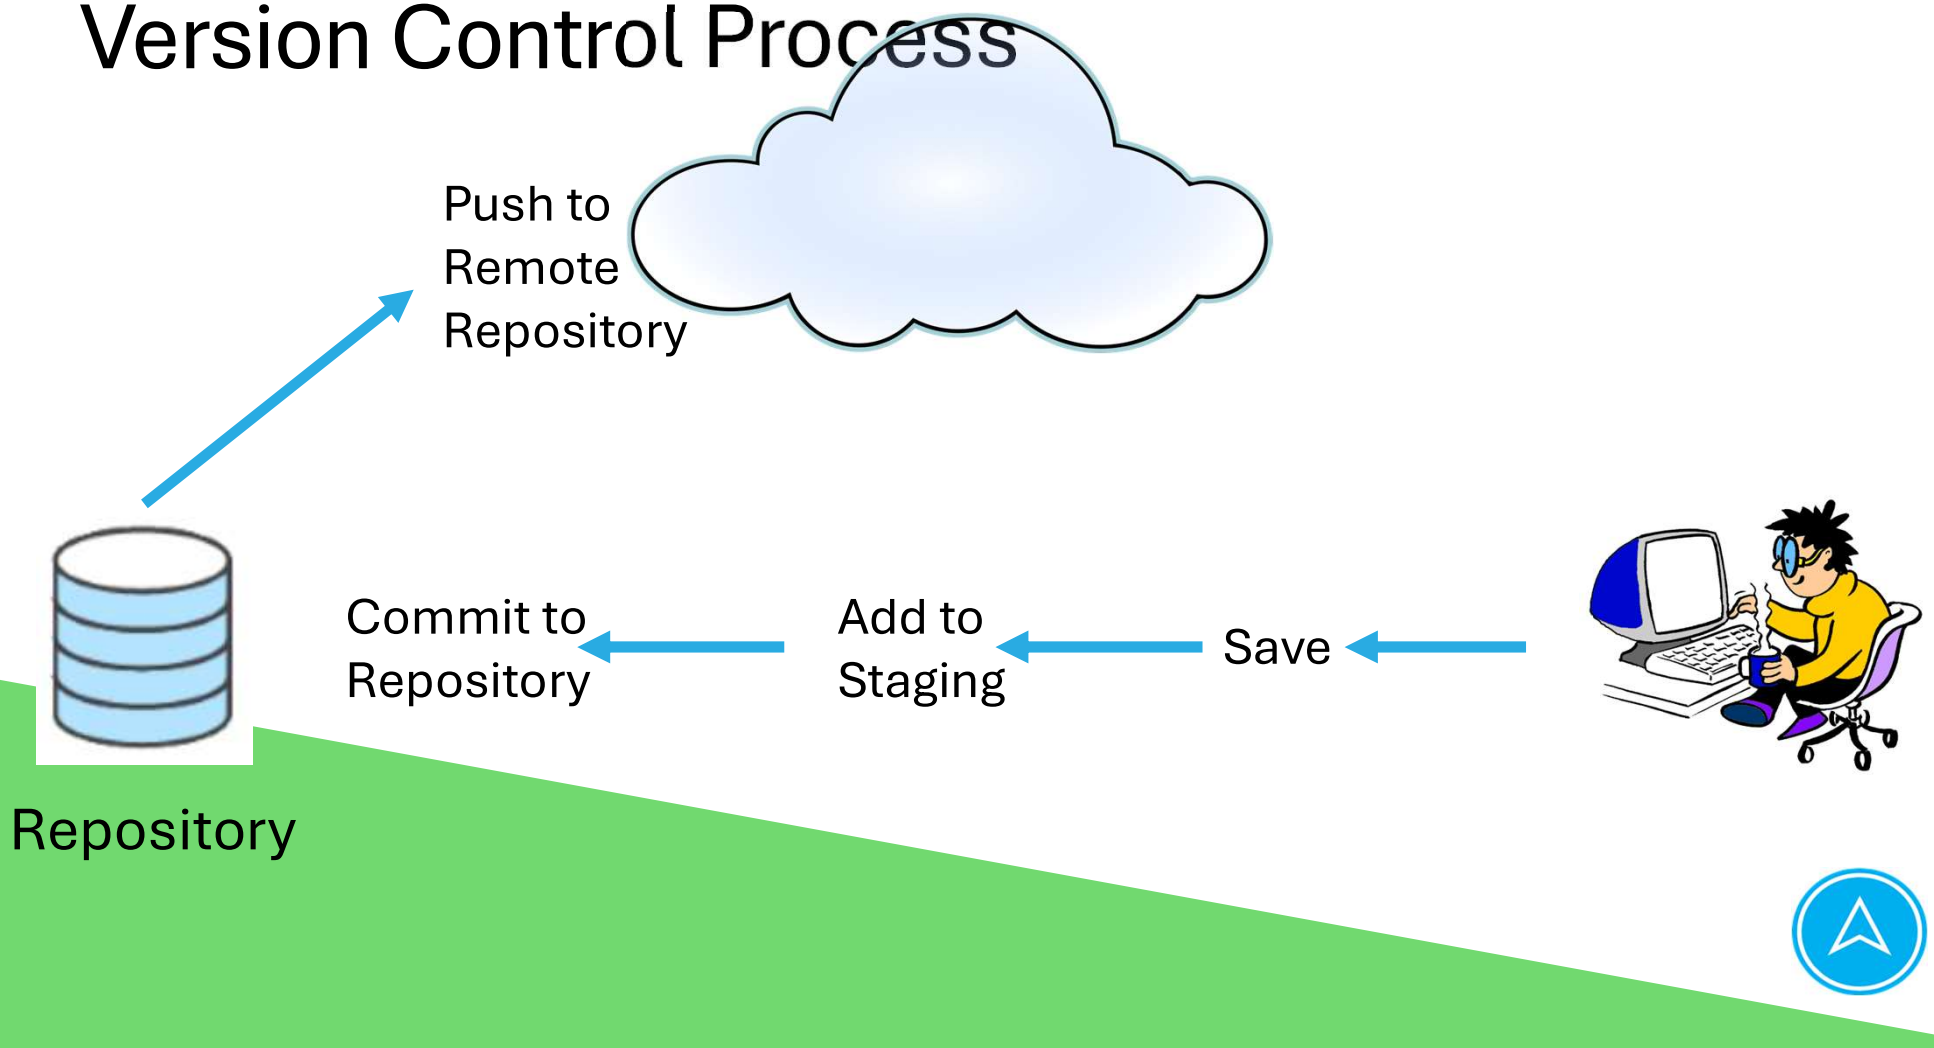

```
MINGW64:/c/Users/Tom Anderson/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture
Tom Anderson@LAPTOP-HGJ23NVD MINGW64 ~/workspace-dirty/module-2-introduction-to-sql/lecture/csharp/dao-lecture
$ git commit -m "Updating DAO"
```

Version Control Process

Git Commands – Your Code

- `git status`
- `git add <filename>`
- `git commit -m "<message>"`
- `git pull origin main`
- `git push origin main`

Using Existing Code

- Clone the repository:
 - `git clone https://git.techelevator.com/campuses/nlr/jul-2024/java-green/student-code/claudia-carmona-student-code.git`

Git Commands – Your Code

- git status
- git add <filename>
- git commit -m “<message>”
- git pull origin main
- git push origin main
- **git pull upstream main**

origin is an alias for **your** repo

upstream is an alias for the **instructor** code

Configure Git

- Change to your newly cloned directory
 - `cd ~/workspace/tom-anderson-student-code`
- Execute the script
 - `sh ./setup.sh`

LET'S CODE!

Tips and Tricks -- Software

- No news is good news. If a message is shown after running a command, read it because it is probably an error. Most commands say nothing on success.
- Press the up arrow to cycle through previous commands instead of retyping
- Use the tab key to automatically complete the path.

Important Class Information

MASTERY AND UNDERSTANDING

- Our exercises focus on **mastery of key concepts**.
- Feedback is provided so you can **know where you need to improve**.
- We expect your average to remain **at or above 2.0**.
- **Any work submitted must be your own**. We may ask you to explain your code to us!
- **Please seek out an instructor or another classmate if you need help!**

| DUE DATES

Exercises are distributed daily via Git. You submit them by *pushing your code* back to Git.

EXERCISES GIVEN...	ARE DUE...
Monday	Wednesday 8 AM
Tuesday	Thursday 8 AM
Wednesday	Friday 8 AM
Thursday	Monday 8 AM
Friday	Tuesday 8 AM

Exercises not turned in by the deadline receive a "0". Once the exercise is late, the highest score you can receive is a "2".

LATE ASSIGNMENTS

- Exercises not turned in by the deadline receive a “0”.
- Once the exercise is late, the highest score you can receive is a “2”.
- **You can only make up 2 zeroes per module**
- You can make up as many 1’s as you wish
- No assignment can be made up after the end of the module (5:00 pm the last Friday)

(hint: at least make an attempt (25%) at every homework assignment)

Git Commands

- **git status**
- **git add <filename> or git add -A**
- **git commit -m “<message>”**
- *git pull origin main*
- *git push origin main*
- git pull upstream main

Use these multiple times per coding session

Use these when starting or ending a coding session

Use this when I tell you there's new code

Your Schedule

1. At least by 8:50 Be in class
You can come in earlier to hang with other students
2. 9:00 Class starts
3. A little review
4. Learn new material
5. Attend Pathway
6. Complete homework
7. Read concept for tomorrow
8. Sleep

OTHER THINGS TO EXPECT

- While we will review many concepts learned during the prework, **we cover a lot of ground.**
- As stated before, **this program can be challenging.** Each day can bring with it a good amount of work. Please make sure that you remain caught up and put in the time with each day.
- Consider this your new **job.** Treat Tech Elevator like a job:
 - be professional
 - finish work on time
 - be prompt
 - be polite.

WHAT QUESTIONS DO
YOU HAVE?

Reading for tonight:

Introduction to Tools Variables and Datatypes
