ELEVATE  YOURSELF

# CSS: Cascading Style Sheet

- CSS is the way we tell HTML how to format itself
- CSS can be included by:
  - inline on any element with a style attribute
  - within the document under a `<style>` element
  - external document reference with a `<link href=>` element

# Styles applied

## Inline:

```
<body style="background-color: green">
```

## Within Document

```
<style>
  body {
    background-color: green;
  }
</style>
```

## As external css file

```
<link rel="stylesheet" href="css/mystyles.css" />
```

# Cascading Precedence

- Inline > In Document > External Sheet
